

SPLASHTACULAR[®]

Waterslides and Waterpark Attractions

Aquatic Play

Creating smiles and adventures for your waterpark

 **Immersive Play & Theming**
Our play units and spray features take interactive play to another level.

 **Full Size Waterslides**
Full-sized commercial waterslides accommodate children and adults.

 **Large Iconic Feature**
Our iconic features spill up to 1,000 gallons of water. That's bigger than any in the industry.

 **Feature Flow Control**
Individually plumbed spray features give owners more control and guests a better experience.

 **More Color Options**
You can select from 188 different colors.

 **KEEP IT SHINY Protection**
Industrial strength finish comes standard on every slide.

 **Double the Spray Features**
Our product incorporates double the amount of spray features per rail.

 **Stainless Steel**
Our play units are made entirely of stainless steel.

A Splashing Success

Taking a plot of dry dirt or outdated water features and transforming them into a thriving waterpark, that's what we do - over thousands of times.

From our innovative and fun designs to our industry-leading quality components and durable finishes, it's how you turn a waterpark into a splashing success.

American made. American ingenuity.

Stainless Steel

Our play units are made entirely from stainless steel. Unlike other products on the market comprised of galvanized steel or stainless steel only on areas submerged in water, we build our products with the highest level of corrosion resistance in mind. This means our products are easier to maintain and reduce maintenance costs in the long run.

More Color Options

Choose from more color options than any other product on the market. We allow you to select from 188 different colors, which means you are sure to find a color scheme that fits in with your current theme and stands out from the park down the road. You can also mix and match the inside, outside and alternate sections on our waterslides with translucent bands and sections.

American-Made

Our products are made exclusively in the United States of America. We meet or exceed industry standards, and we take pride knowing that our clients are purchasing a product with the highest quality standards in mind. No need to worry about quality control or the materials shipping from outside the country, our products will deliver on time as promised.

Sloped Pool Floors

Are you installing our structure on a sloped pool floor? We've thought about this application ahead of time, and our products are designed with both flat and sloped pool floors in mind. Provide us with some site information, and our team can design a structure to fit your unique situation.

Flangeless Connections

We decided our products needed a newer, cleaner and more elegant look from the traditional offering. Gone are the days of those unsightly industrial looking flange connections. Our smooth lines and flangeless pipe connections provide an aesthetical look that says "fresh" and "fun" with far fewer catch points to make it much safer and more sophisticated.

ADA Compliant

Compliant with ADA standards and creating a product fit for everyone, we've designed our play units to be accessible to virtually anyone. Our unique and convenient design has eliminated the unsightly tarps and nets you will see at ADA access points and include ADA handrails and grab bars, rarely found on other play units on the market.

Immersive Play & Theming

Splashtacular's play units and spray features take interactive play to another level. Indoor or out, seasonal or year-round, we push the boundaries of imagination to create solutions that make your facility uniquely marketable.

Double the Spray Features

Have you taken a look at the sparseness and scarcity of play features with other play units on the market? Sure, the structure may have a large impact presence, but there aren't enough features to go around. Our product incorporates double the amount of spray feature per rail, which means more fun and longer play time for your guests.

Feature Flow Control

One of the best benefits of our play units are the individually plumbed spray features. With water lines that feed each feature individually, we give you as the owner the ability to tune each feature exclusively of the others to its' intended water flow. Our structure is easier to winterize, and provides a better experience for your guests.

Full Size Waterslides

Larger radii slide sections means that our play units feature full-sized commercial waterslides, that (unlike others on the market) can accommodate children AND adults. No longer will Mom and Dad feel awkwardly uncomfortable accompanying their child to ride a waterslide only to get stuck or maneuver their way back down to ground level; they can join in on the fun.

Large Iconic Features

Our play units include two iconic features that spill up to 900 gallons of water! That's bigger than any in the industry! Whether you are a municipal facility, small waterpark or large theme park, we have a solution that fits every application and demographic, no need to worry about excessive water or inadequate amount of "wow" for your guests.

 **No Pool. No Problem.**
Our spray features take interactive play to another level. Use them to enhance a lazy river or create a unique sprayground. Use a combination of bubblers and spray guns to entertain all guests - from tots to teens. Each feature is individually plumbed for maximum control for owners and maximum fun for guests.

Zero Entry Interactive Play

Zero entry makes spray grounds safe for all guests and minimizes costs by eliminating the need for lifeguards.

Spray & Play for Any Budget

A wide variety of spray features offers hours of interactive play for community parks of any size and any budget.

Multi-Generational Play

From tots to teens, spray features offer fun for all ages.

Customize Colors & Themes

With more than 188 colors you can match spray features to any theme or design.
