

## Ride Specifications

- ✓ Tower Height: 58'
- ✓ Footprint: 80' x 80'
- ✓ No pool required
- ✓ Ride Capacity: 240 riders per hour
- ✓ Two riders at a time for generous throughput
- ✓ Two DrenalineDrop™ Launch Capsules

Give park goers the ride of a lifetime. From the towering launch platform, riders gaze down 58 feet to see two 32-inch tubes enter opposite sides of an enormous bowl. After entering separate launch modules, adrenaline surges as riders await the countdown for simultaneous release. Launching down near-vertical entry tubes, riders accelerate up to 40 mph. By streamlining their bodies in a straight line, experienced riders will be able to chase each other inside the bowl for multiple revolutions. The ride comes to a gradual stop in the shallow pool located in the middle of the bowl. Riders then simply stand up and head toward the spiral stairway to either exit the ride or head back up the tower for yet another thrill pumped experience.
