Double
BowlsEye®

Splashtacular's Double BowlsEye® is a one-of-a-kind, next generation Splashtacular® innovation. From the towering 59-foot tall platform, riders gaze into two 54-inch enclosed slides entering opposite sides of an enormous bowl. The group of four riders is separated into (2) two-person rafts, which are positioned back-to-back on custom controlled launch platforms. Riders are simultaneously propelled in opposite directions and disappear into darkness. Within seconds, daylight appears as they enter the massive bowl before realizing they are not alone, but are instead being chased by the riders in the other raft! Each respective raft then terminates through a porthole into a finish lane only to challenge the competition to a rematch.
