## Hands-On Quality Craftsmanship

KEEP IT CRAFTY™ is the guiding principle behind our commitment to manufacturing the highest quality waterslides. It's more than a commitment; it's also our hands-on process. From the application of the first layer of gel coat paint to removing the mold and applying the finishing touches – our experts are hands-on at every step along the way. KEEP IT CRAFTY leads to the highest quality that increases your waterslide and waterpark equipment's longevity.

## The Keep It Crafty™ Process

- ✓ Molds are meticulously cleaned, waxed and taped to eliminate any imperfections from previous projects.
- ✓ The first layer of gel coat paint is hand sprayed into the mold.
- ✓ Fiberglass is roped onto the mold by experts. KEEP IT COZY™ is an optional layer of insulation added to provide temperature regulation and utility-cost savings to park owners.
- ✓ Additional fiberglass layers are applied to achieve the perfect thickness.
- ✓ Our experts use hand rollers to remove air bubbles and push the fiberglass into all the tight corners.
- ✓ After an overnight curing process, our flume pieces are sanded, fastening holes are created and a final application of gel coat is applied.
- ✓ Finally, our KEEP IT SHINY™ protective, high-gloss coating is applied to keep waterslides looking new for years to come.
